ABSTRACT

1

2

3   A virtual keyboard for typing the safety password, comprising the steps

4   of displaying a multiple key keyboard; generating and assigning a

5   predetermined number of characters to each one of the keys, such that the

6   user selects a key which is associated with one of the predetermined number

7   of characters; and displaying the predetermined number of characters in

8   relative proximity to each one of the keys.
